Introduction ~

IN 1848, just 101 years ago this spring, Stephen Hoyt, grandfather of our present president, started in the nursery business on the very site where our Nursery stands today.

In the early years only a few acres of trees were grown, propagation consisting almost entirely of fruit trees, since there was little demand for ornamental plants at that time. Later on through the years, flowering shrubs, evergreens, and an almost complete line of nursery stock were added, until we now grow nearly all varieties of trees and shrubs which thrive best in this locality.

We sincerely thank our many thousands of friends for their liberal and ever-increasing patronage that has enabled this Nursery to grow until we now have several hundred acres under cultivation, covered with thousands of plants.

During the past hundred years, we have always attempted to grow only the best nursery stock. In the future we aim to offer still finer plants and better service.

NOTICE TO CUSTOMERS

◀ This catalog lists our trees and shrubs, but to appreciate them fully you should see them. Come over to the nursery and look around.

◀ **OUR MATERIALS** and service are available to you directly or through your Landscape Architect.

◀ **PLANTING** begins in the spring as soon as frost is out of the ground and extends through April, May and June. Fall planting begins in August and extends through December, or until the ground freezes. When the season is far advanced, we reserve the right to ball and burlap (B&B) at extra charge, those items not so listed, to insure success in transplanting. The following chart is our basis for these charges:

Schedule for Balling and Burlapping (B&B) Charges

Size of Plant or Tree	Charge	Size of Plant or Tree	Charge
1½ to 2 ft. high.....	\$0 50	2 to 2½-in. caliper....	\$5 00
2 to 3 ft. high.....	60	2½ to 3-in. caliper....	6 00
3 to 4 ft. high.....	75	3 to 3½-in. caliper....	7 50
4 to 5 ft. high.....	90	3½ to 4-in. caliper....	10 00
5 to 6 ft. high.....	1 50	4 to 4½-in. caliper....	15 00
6 to 8 ft. high.....	2 50	4½ to 5-in. caliper....	25 00

The above prices apply to those items in our catalog which are not priced Balled & Burlapped (B&B), when balling is necessary or requested.

◀ **PRICES** in this list are f.o.b. New Canaan, Conn., and are for our selection only. Specimen plants, many of which are not included in this list, when selected by you, will be charged for according to their individual value. All quotations offered are subject to prior sale. These prices supersede all others and are subject to change without notice.

◀ **DELIVERIES** — pro rated charge on scheduled trips. Special deliveries conflicting with normal schedule will be arranged and charged for at cost.

◀ **TERMS**—Cash or satisfactory references must accompany all orders, unless the person ordering is known to us.

GUARANTEE

We guarantee to replace, at one-half original purchase price, any plant or tree that we have supplied, which dies from natural causes within a period of one year (except those items marked with a star), provided the plants have been properly cared for, and provided payment has been received in 30 days or as arranged. The cost of delivering and planting of replaced material is borne by the purchaser and replacement is made at our convenience.

The Planting of Big Trees

It is becoming more and more necessary to plant big trees, for people are moving farther into the country where new developments are being made. This often results in the building of homes in places where large trees are needed for beauty and for shade purposes.

We have been doing big-tree work successfully for forty-six years and are equipped with both machinery and experience for doing it efficiently and well.

We believe that any large tree must be moved with a ball of earth. This does not mean necessarily that the ground must be frozen, for our equipment can pick up a tree with a ball whether it is frozen or not. By moving a tree in this manner, we are sure to take all the fibrous roots, which are the most important feeders.

After a tree is moved, great care must be exercised for the protection and feeding during the first two years. It should be mulched with manure the next two winters; that is, the ground around the tree should be covered as far out as the ball extended when it was planted. Then, in dry weather, the surface soil should be kept loose so that it will not bake, and the ground watered sufficiently to keep it moist all the way to the bottom roots. It is not good practice to re-sod around the tree for the first year or two. Once it is established, these precautions are unnecessary. However, food and attention, properly applied, will help any tree.

We are always glad to offer assistance or answer any questions that our friends may wish to ask on this subject.

AMERICAN CEDAR, 30 feet tall; stem diameter 10 inches; diameter of ball 7 feet. This tree was planted for one of our clients in 1936 and is thriving today.

Ornamental and Shade Trees

Possibly the most attractive feature of many of our New England towns is their large shade and ornamental trees. It is absolutely necessary to include deciduous trees in home and street plantings, since no others equal them in foliage and growing characteristics.

It is important to plant some of these trees each year, since it takes from ten to twenty-five years to produce a good-sized specimen. Plant medium-sized trees and they will grow rapidly into lofty specimens.

Trees not marked B&B (Balled and Burlapped) can be moved with bare roots when taken early in spring, before leaves appear, or in autumn after leaves have fallen.

Flowering Trees

There is probably no group of deciduous plants as popular or well known as this one. Their interesting habits of growth, glossy foliage, and gorgeous spring blooms, followed by attractive fruit of many colors in late summer and fall, make them an all-year-round satisfaction. Trees in this group thrive in almost all kinds of soil, and most varieties are very hardy. They flower best in full or partial sunshine.

ÆSCULUS hippocastanum. White Horse-Chestnut.

50 to 60 ft.

Breaks into foliage, combined with large upright clusters of white flowers, early in May. Grows into a lovely shade tree.

Evergreens

Evergreens give permanent beauty all the year, carrying their beautiful richly colored foliage through the winter when deciduous trees and shrubs are leafless. Every home-builder, no matter how small the grounds, needs them. They not only provide privacy, but are indispensable for shelter and wind-breaks, hedges, backgrounds, and specimens in landscape work. The slow-growing and spreading varieties such as Yews and Junipers are available for use in house and garden plantings. Practically all evergreens require light and air. Yews and Hemlocks are the most tolerant of shade.

All Evergreens Balled & Burlapped

Abies • Fir

Abies concolor. White Fir. 50 to 60 ft.

A large, pyramidal tree, its silver-green foliage blending well with other evergreens. Does well in all soils. Used for screen work and lawn specimens.

Juniperus • Juniper; Cedar

The Junipers are a large group of evergreens growing in almost all parts of this country, as well as in many other parts of the world. These plants are used extensively in garden work, due to their varying types and interesting habits of growth, either columnar, bushy, or spreading. All varieties are extremely hardy and have attractive foliage, varying in color from light to dark and even to a bluish green. Some have showy blue berries in the fall. They may be used as individual specimens, for screens, hedges, or in rock gardens. They grow best in a well-drained soil in full sunshine, and for best results should be fed occasionally to maintain their color and artistic habits of growth.

Pinus • Pine

Most of these well-known evergreens grow rapidly into large, rugged trees. They have attractive foliage of various colors and are particularly well suited for windbreaks or screens, but they also grow into beautiful specimen trees. Some varieties thrive at the seashore, while others do best at higher elevations. All varieties, however, grow well under exposed or windy conditions and do best in full sunlight. Most Pines enjoy a light, well-drained soil.

Pinus montana mughus. Mugho Pine.

3 to 4 ft. high, 6 to 8 ft. wide.

A very fine low-growing Pine, used successfully in border work. One of the best for shore plantings. Hardy. Each

Taxus • Yew

All varieties become handsome plants, some low or dwarf-growing, some faster and more upright, while others grow into large pyramidal-shaped trees.

They may be used in gardens, for hedges, near the house, or as individual specimens.

Yews are very hardy and some varieties are adorned with beautiful red berries in the late summer or fall. Some of these plants tolerate shade, but most grow best in full sunlight.

Taxus baccata repandens. English Spreading Yew.

Thuja • Arborvitæ

The Arborvitæ is among the well-known American evergreens. Most varieties are tall, fast growing, and are useful as hedges, windbreaks, backgrounds, and specimens in landscape work. The slower-growing and dwarf varieties are useful for foundation plantings and garden designs. The Arborvitæ is hardy and will thrive in all kinds of soil conditions. Most varieties need full sunlight for best results.

Tsuga • Hemlock

Stately grace and dignity characterize the Hemlock, which we consider the most beautiful of the larger North American evergreens. Its attractive dark green foliage weeps gracefully and is tipped with the bright green of new growth during the spring. Hemlocks are hardy and thrive in almost any soil. They tolerate the shade better than other evergreens and are very adaptable, being used for hedges, backgrounds for gardens, or as specimens. They stand shearing or pruning or may be allowed to grow naturally.

Hemlocks Are a Hoyt Specialty

We believe our Hemlocks are better grown, have better color, and develop into better plants when older, than the usual run of Hemlocks.

Azaleas

Happily situated by being planted in full sunshine but protected from winter winds, Azaleas produce brilliant blossoms of many colors. They want an acid soil, and during blooming time require an abundance of moisture. Some of our native types grow into fairly large bushes, but most Azaleas seldom attain a height of more than 3 or 4 feet.

Hardy Evergreen Shrubs

All Balled and Burlapped except where otherwise noted.

The importance of this class of plant material has long been recognized by many garden lovers. Since most are evergreen, they present an attractive appearance in both summer and winter. They are comparatively slow growers, are easy to keep in bounds, and grow more beautiful with age. All of these varieties grow best in a somewhat acid soil, lightened by plenty of leaf-mold or peat moss, and some require protected locations for best results. Certain varieties may be used with success in plantings in the shade.

Flowering Shrubs

Included among the Flowering Shrubs are those old favorites well known to all, as well as some worthy new varieties. We offer shrubs in two grades, a regular or standard grade and our specimen grade.

Our standard shrubs are good, sturdy, well-grown plants that will thrive and grow rapidly into fine bushes.

The specimen shrubs are larger, well-developed plants that have been spaced and pruned in the nursery, and when used in plantings, give an immediate landscape effect.

All Flowering Shrubs are bare root except where marked B&B (balled and burlapped)

Syringa • Lilac

Spring is at its height when the Lilacs are in flower. Of the many flowering shrubs, the Lilac is surely the most reliable, lasts longer, and annually bears the handsomest flowers. Lilacs are hardy, thrive almost anywhere, and have very attractive foliage.

The Hybrid varieties are the most popular with their large, single or double flower-heads. They are equally as fragrant as the old-fashioned type and have exactly the same growing characteristics. Our Hybrids are all grown on Lilac roots, a necessity for proper development of the plant. We believe these plants the most worthy of all flowering shrubs. Lilacs want a sweet soil and bloom best when in full sunshine.
